

GDPI & Trainer Feedback Web Application

1. GDPI Evaluation Module

Dashboard Reference (Admin View)

Sample GDPI Evaluation dashboard, as seen by an admin. The student selector / filter dropdown appears in the top-right corner (shown here: "swaleha paliwala (FIN)"). A student logging in would see only their own record, with this filter hidden.

What the dashboard shows (same for admin and student, except the filter):

- **Overall Performance** — aggregate score and comparison to the top performer.
- **GD Score, Technical PI, Behavioral PI** — individual scoring modules.
- **Skill Radar** — a visual comparison across GD, Technical, and Communication layers against a top benchmark.
- **STAR Method Breakdown** — behavioral response scoring across Situation, Task, Action, and Result.
- **Resume and CV Diagnostic** — relevance, formatting, impact verbs, detected skills, and ATS score.
- **Trainer Feedback** — written technical and communication evaluation from the trainer.

2. Trainer Feedback Module

2.1 Access

- The college logs in using the same **shared credentials** provided to them.
- Once logged in, the college admin sees the **active feedback sessions** on their dashboard.

2.2 Filtering Trainer & Session Records

This dashboard is used by the **college admin** to review trainer performance and training session feedback. Records can be filtered using the following criteria, available at the top of the dashboard:

- **Course**
- **Year**
- **Department**
- **Batch**
- **Time Range**
- **Trainer**

2.3 Dashboard Reference (College Admin View)

Sample Trainer Feedback dashboard, as seen by a college admin. Filters for Course, Year, Department, Batch, Time Range, and Trainer appear at the top; the dashboard summarizes overall rating, total responses, training hours, active domains, performance trends, category scores, domain breakdown, rating distribution, top trainers, and topic summary.

Note: The values shown above (0.00, 0, No data available, etc.) reflect an empty/unfilled state before feedback sessions have been submitted — once sessions are recorded, these panels populate with live data.
